## Case Study: Deckmaster System R

### Pharmaceutical Plant, Car Park Refurbishment

#### Project Brief

In Stevenage, Hertfordshire, GlaxoSmithKline required a new decking system for the multi-storey car park at its pharmaceutical plant. As well as a waterproofing coating to the Top Deck, the specification also had to provide line and car park bay marking and a contrasting colour finish to the access ramps.

#### Key Requirement: High Performance, Seamless Waterproofing

Ideal for multi-storey car parks and podium decks, Deckmaster System R is a cold applied, high performance waterproof covering that combines high rubber content and other organically sourced materials.

Designed to deal with vehicle traffic, particularly at heavy impact areas such as the access ramps, Deckmaster System R complies with BS EN 1504-2 as a protective waterproof coating.

#### Key Requirements: Quality Control

Particularly in view of the complex nature of the works, the Client requested Proteus Waterproofing and its Licensed Contractor to work in close partnership to successfully deliver the project to a very high standard.

#### Key Requirements: Durability

Designed to be maintenance free for 20 years, the British made Deckmaster System R is available in a range of specifications for car park roof decks, intermediate decks and basement decks.
