

Proteus Waterproofing

Case Study: Pro-BW System

Proteus provides protective coatings at Balham balconies

Project Brief

Wandsworth Council required a cost effective, cold applied protective solution to existing asphalt balconies, which at the same time could provide a skid-inhibiting finish.

Key Requirement: Minimal disruption

As it is liquid-applied, the Pro-BW system ensured quick and easy use whilst also ensuring the residents were allowed access to their balconies on the same working day.

Key Requirement: Speed of application

Pro-BW met with both the client's and tenants' criteria with areas out of use for periods no longer than two hours.

Key Requirement: Health and Safety

The contractor did not require a hot works permit to make asphalt repairs, as these were carried out using Proteus Waterproofing's fast cure mortars and the cold applied, seamless Pro-BW system.

Key Requirement: Performance

The innovative liquid seamless waterproofing technology provides a range of roofing and waterproofing systems, with durability terms of 10, 15, 20 and 25 years.
