

Proteus Waterproofing

Case Study: Proteus Pro-System®

Waterstones, Leeds

Project Brief:

Waterstones Leeds, one of the largest bookshops in the country, required major refurbishment works to the existing asphalt roof as it had reached the end of its serviceable life due to cracking across the membrane. To prevent further damage and extend the life of the roof, **Proteus Waterproofing** were asked to supply a high-quality waterproofing solution, therefore, **Proteus Pro-System®** was specified.

Key Requirements: High Performance Waterproofing

The asphalt deck was prepared using **Pro-Carrier Membrane SA** to cover the extensive cracks. **Proteus Pro-System®** could then be overlaid with ease onto the roof and any awkward detailing to create a seamless, low maintenance, robust finish. **Proteus Waterproofing** worked closely with the **Proteus Approved Contractor** to ensure the project was successfully delivered to a very high standard, providing the client with a long-lasting solution.

Key Requirements: Health and Safety

Proteus Pro-System® is a cold applied waterproofing solution, therefore removes the need for hot works. This is of utmost importance when working on occupied public buildings. **Proteus Waterproofing's** cold applied liquids remove the risk of fire allowing the **Proteus Approved Contractor** to complete the works safely, while meeting all health and safety criteria.

Key Requirements: Long Term Performance

Proteus Pro-System® offers a low maintenance, durable waterproofing and protection solution for a range of new build and refurbishment applications. It is cold applied, eliminating the risk of fire and once cured, provides a completely seamless waterproof protection and has excellent UV stability, making it suitable to use in all climates. **Proteus Pro-System®** forms a seamless, fully adhered membrane, is **manufactured in the UK**, and is **BBA Certified**.
