Safe & reliable systems providing full Fall Protection

Why Proteus?

Personal Fall Protection

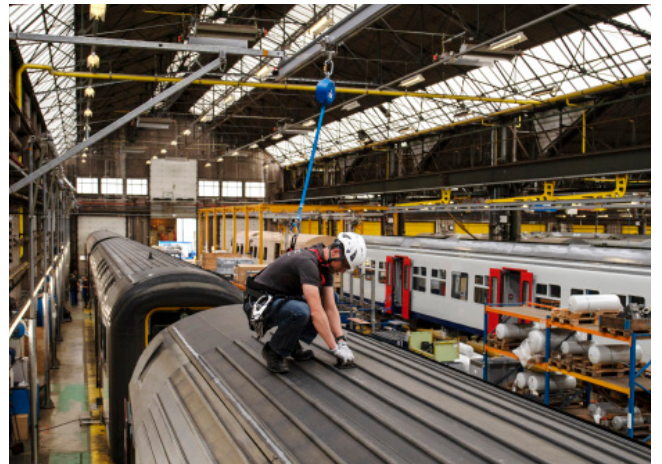

Proteus' Roof Lifelines are a great solution for visually sensitive buildings that require a Fall Protection system - providing a personal measure of protection where it is not feasible to supply collective edge protection for personnel.

These market leading roof lifeline systems are designed to be safe and easy to use, operating horizontally, vertically, around corners, and on up-and-down inclines, offering full protection that is compliant with current legislation.

Whilst complementing individual building design, Proteus' flexible systems are also sensitive to planning requirements for new buildings. Each safety system is designed to meet specific site requirements, whether directly fixed to a solid structure, or built-up for composite metal decks, single ply membranes, concrete, or lead lined roofs.

Types of Application

- Flat roofs
- Metal deck roofs
- Standing seam roofs
- Horizontal anchorage
- Temporary requirements

Testing frequency: At least every 12 months, or more frequently depending on use.

Testing standard: BS EN 795:2012

Personal Fall Arrest Testing: Overhead, Horizontal, Vertical, Track, Internal

What to look for:

- Free movement of travelling devices whilst using the system
- Correct number of swages
- Cable Tension
- Fractured Cable
- Missing or loose fixings
- Fixings to the roof surface
- Energy absorbers
- Visible damage or vandalism
- In-date compliance tags
