

# Jubilee Park Fountains, London

Project Size: **150m<sup>2</sup>**

Project Type: **Refurbishment**

Industry: **Leisure & Hospitality**

Application: **Maintenance & Repair**

System: **Pro-BW® Plus**

## Project Overview

Located in one of London's most iconic locations, Jubilee Park at Canary Wharf, the fountains are a much-loved feature in this vibrant public space. The existing fountain liner required refurbishment to ensure long-term durability and performance.

Proteus Waterproofing was asked to put forward a waterproofing membrane that would tank the fountains to provide a long-term waterproof solution. Given the prominent and busy location, careful planning of the waterproofing was needed. A fast-cure, cold applied liquid waterproofing solution was required to meet the tight programme.

## Key Challenges & Solutions

- **Rapid turnaround:** Due to the site's high level of traffic, the installation programme needed to be quick. Proteus Pro-BW® Plus was selected by the client for its fast cure properties and a specification was created by Proteus Waterproofing.

- **Aesthetic appearance:** In such an iconic location, the solution needed to reflect the area's aesthetic beauty. As such, the seamless look of the fully reinforced membrane, once covered with water, was crucial.
- **Long-term protection:** Pro-BW® Plus has a minimum design service life of 30 years as stated by the British Board of Agrément. The completed installation was further supported by a 20-year Proteus Guarantee.

## Conclusion

Proteus Waterproofing provided a seamless solution for the refurbishment of the Jubilee Park Fountains. Our Pro-BW® Plus system's fast cure and high durability enabled the client to deliver the project on time and to the required high standard. The fountains now enhance this iconic green oasis at Canary Wharf, ready for visitors to enjoy for years to come.
